

TOOL CHANGER

Highly productive solution for your production
with the PROFIMAT XT

Key data

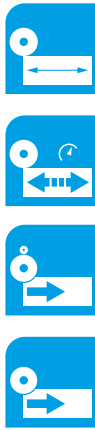

The PROFIMAT XT combines four technologies in one machine: reciprocate, creepfeed, CD and speed stroke grinding. With the new tool changer these processes can now be automated.

- Magazine with 4 grinding wheels
- max. wheel diameter 400 mm
- max. wheel weight 40 kg
- max. wheel width 160 mm

Automation of production

PROFIMAT XT

The highly productive PROFIMAT XT **combines four grinding technologies in one machine** – now also **automated and highly flexible** with the option of a mostly unmanned operation.

Highly productive machining

High productivity is achieved thanks to the possibility to prepare, for example, roughing and finishing wheels or conventional and CBN wheels in the changer, thus enabling both high stock removal rates and the precise finishing of surfaces in one operation.

Set-up during the process

The loading device enables **easy and safe set-up** of grinding wheels during production. This further reduces the set-up times.

Automation

The use of sister tools ensures continuous production in **unmanned operation for complex workpieces**.
